

## Feed-Thru Boot Assemblies

### PRODUCT DESCRIPTION

Feed-thru Boot Assemblies feature a one-piece design which dramatically reduces installation time and difficulty. The split one-piece style simplifies mounting by freeing the installer hands in order to position the coax runs, insert the cushion and tighten the round member adapter clamps without having to hold two separate pieces of the boot in place. Boot assemblies are designed to be fitted onto EP series Entry Panels in wall-roof feed-thru applications. The durable boot is unaffected by ozone, sunlight, aging, or hot and cold extremities. It is designed to meet IP66, ASTM D 2000 and SAE J 200 specifications. Each boot assembly includes boot and two round member adapter clamps. SC-series cushion inserts fit inside the boot assembly to hold the coax in place. The cushion inserts maybe ordered with the boot or separately to accommodate specific application requirements. See chart below and on second page.

### TYPICAL APPLICATIONS
