

Universal Stand-off Adapter for Attaching Cable Hangers to Round Tower Members

TYPICAL APPLICATIONS

PRODUCT DESCRIPTION

The snap-in adapters feature 3/4" holes for snap-in hangers and can accommodate other hanger types using an optional insert nut to create a 3/8" hole. When paired with separately ordered angle or round member adapters, the snap-in adapters enable secure installation of hangers to towers. In addition to providing a reliable attachment, these adapters offer clearance between the tower and cable hangers, which is useful when running cables over tower obstacles like cross members.
